

Proposed sampling of woody bamboos and outgroups (Oryzeae, Olyreae, Streptogyneae) for the Bamboo Phylogeny Project. \* = monotypic genus; # = DNA at ISU or Fairchild; & = silica gel dried leaf material at ISU; C = in cultivation in the U.S.; ✓ = sequenced or scored; □ = to be sequenced or scored; p = partially complete; e = expected from ongoing projects (symbols in green = E. Widjaja in Indonesia; symbols in red = Li De-Zhu in China; symbols in blue = Trevor Hodkinson in Ireland). Type species for a genus in boldface.

Total number of taxa for sequencing: 160 (6 OG + 30 NT Clade + 90 P + 34 N)

Total number of taxa for AFLPs (46 NT clade + 2 OG): 48 (-32 sequenced = 16 additional)

Total number of taxa in study: 176 (for two rounds)

Taxon	<i>rbcL</i>	<i>ndhF</i>	<i>rpl16</i> intron	<i>trnL</i> - <i>trnF</i>	morph
# of taxa already sequenced or scored	18	31	51	39	49
